Apparel and Fashion

Shoplifting and internal counterfeit are still the main reasons that cause shrinkage in the apparel (fashion) industry. Retailers have to protect their products and assets to prevent losses. Meanwhile, security measures should not scare off customers.

We help retailers to prevent losses and optimize merchandise availability effectively by our EAS and RFID technology.

ESL

A large variety of products are sold in supermarkets and Hypermarkets. External and internal theft affect considerably to store's profitability. Loss prevention should be effective and reliable, since margins are relatively small in this consumers' segment. Nevertheless, each type of product asks for a different approach. To offer the best protection, we provide the best solutions to protect each type of product; all kinds of tag and labels will be used to meet the different demands such as cloth, cosmetic, alcohol, living articles, foods, etc.

Labels

Beauty and Pharmacy stores sell a wide variety of items that are attractive to occasional or professional thieves. Some articles are small in size, which make them easy to hide, some are expensive and highly wanted amongst shoplifters. Retailers, pharmacies and drugstores that are active in this market segment invest an important amount of money and resources in loss prevention measures. We provide hardware, accessories such as tags and labels, for reliable retail security and identification solutions.

Packing: 20000pcs/ctn

Source Tagging

Source tagging is the application of security labels at the point of manufacture.

Today's retailers do not have excess store labels for the application of EAS labels in store. This labor is better spent with customer-facing activities.

Source tagging is ultimately about control. Controlling the type of tag applied, and where it is applied on the product. It also allows retailers to track, measure, and monitor products across the entire scope of their supply chain. Rather than waiting for the products to be delivered to the store or DC before they can be tagged, tagging them at source means that there are no gaps in supply chain visibility.
